

Software Requirement Specifications

Application Overview:

The purpose of this software is to be a centralized hub for the Duke Women's Flag Football club that can reduce the need for Exec to use several platforms, such as When2Meet, Google Sheets, and GroupMe, to manage event scheduling, tournament logistics, and travel logistics, including transportation, lodging, and communicating these details to players. The intended users are Exec members and players on the team. As a new club team at Duke, it would be ideal for much of the day-to-day team operations to be simplified, less time-consuming, and easier to manage so that Exec can focus on club growth, player retention, team improvement, and planning events such as outreach and community activities. Because members of Exec are also students, making the administrative side of running the team easier to manage is one of the primary goals. The software will also provide players with a consistent place to find and revisit important information about practices, tournaments, and other team activities, without needing to search through GroupMe history.

Functional Requirements:

For Exec Members:

- Create Announcements
 - Exec members can create announcements to post important information, updates, and reminders. Exec will be able to set a time or date when the announcement should expire and no longer be displayed to players.
- Create Events
 - Exec members can schedule events through a create event form. In this form, exec will specify event information such as name, date, location, and other details. Once the event is created, other players should be able to view the newly added event in the list of upcoming events.
- Create Polls
 - Exec members can create polls via a form. Exec can specify what the question is and the options they want players to vote on.
- Generate recurring (weekly) practices
 - Exec members can just press a button that will automatically create recurring practices for the season based on the days of the week the team has practice. Exec members will have the option to select default values, such as practice location, time, and event details, but will be able to edit these values later if needed.
- Edit Events
 - Exec can click on events and edit information such as the name, date, location, and other details. They also have the option to cancel an event or delete it

altogether (Let's say a practice was generated during a day students have spring break. Members of exec are able to delete an event that was never meant to exist). Exec can also change open or close to RSVP for an event (Let's say a tournament is two months away, but exec has the information to create an event for it. Exec members can close RSVP for individual events, allowing event details to be visible to players even when RSVPs are not yet open)

- Edit Announcements
 - Exec can edit announcements by pressing the edit button (only visible to exec members) and edit the content of the announcement, whether the announcement should be pinned, and the time the announcement expires.

For all Players:

- View Upcoming and Past Events
 - On the landing page, players can see a few events whose date is approaching the soonest. But players can see all upcoming events and past events on the events page. They can also filter events by type (practice, competition, or other).
- RSVP to Upcoming Events
 - When clicking on an event either from the landing page or the events page, players can indicate whether they will be going, not going, or maybe going to an event.
- View Announcements
 - On the landing page, players can first see announcements created by exec.
- View Roster
 - On the roster page, players can view the current roster. This includes player names, jersey # (if applicable), preferred positions (if any), and the semester they joined the team.
- View and Edit Profile Page
 - Players can view their own profiles and edit information such as their name, email, phone number, etc. On this page, players can edit their own jersey #'s, preferred positions, etc.
- View team playbook
 - Players can view images of the plays in the team's playbook and click on the play to learn information about the play itself.

MVP Scope:

- **Core MVP requirements:**
 - Create Announcements
 - Create Events
 - Create Polls
 - Editing event details
 - Canceling and deleting events
 - Edit Announcements
 - View Upcoming and Past Events
 - View Announcements
- **Stretch/Future features:**
 - Generate recurring (weekly) practices
 - RSVP to Upcoming Events
 - Opening and closing RSVP for upcoming events
 - Edit Profile Page
 - View team playbook
 - View Profile Page
 - View Roster

Assumptions and Constraints:

- The application will primarily be used by Duke Women's Flag Football players and Exec members.
 - Exec members will be responsible for creating and maintaining team information and events.
 - The application will initially be designed for the needs of Duke Women's Flag Football rather than for general use by other teams or organizations.
 - The application is being developed by a single person (me) as part of the independent study.
 - I have a narrow development time window (5 weeks).
-
- Architecture diagram
 - Tech stack selection (and tradeoffs)
 - Start connecting db to backend using dummy data
